

Calgary Equity Index: Climate and Environment Domain Score By Census Tract

The Climate and Environment domain score is an equally weighted combination of indicators that reflect climate risks and environmental conditions in Calgary. A high domain score reflects areas with greater inequities and more climate and environmental needs (such as areas with fewer trees, hotter temperatures, high flood risks, and more noise pollution). A low domain score reflects areas with fewer inequities and fewer climate and environmental needs (such as areas with greater tree density, lower flood risk, and more green spaces). The Climate and Environment domain score for Calgary was 54.7 in 2024.
