

Calgary Equity Index: Activity Limitation (Relative Severity) (%) By Census Tract

This variable measures the relative severity of activity limitations among people who report having a limitation, based on data from the 2021 Federal Census. Activity limitations include challenges with vision, hearing, mobility, cognition, or mental health, and are categorized by how frequently they occur (always, often, or sometimes). The percentage reflects the severity level within the population that has an activity limitation, not the entire population of the area. A higher percentage means a greater proportion of individuals with more severe limitations. The Calgary average for this indicator was 62.4 in 2021.
