

## Calgary Equity Index: Income Inequality Ratio (P90/P10) By Census Tract

This ratio measures income inequality by comparing the income of households at the 90th and 10th percentiles of after-tax income. The 90th percentile is the income level where 90% of households earn less, and the 10th percentile is where 10% of households earn less. A higher P90/P10 ratio means a larger gap between high and low incomes, indicating greater income inequality. The Calgary average for this indicator was 4 in 2021.
